# Creating QuickConnect Codes™ for Bluetooth Devices

The Code Corporation makes it easy to quickly link the Code Reader 2500 (CR2500) and Code Reader 3500 (CR3500) to Bluetooth-enabled devices. Code Corp. will create a small Data Matrix code to be placed on a device. When the code is scanned, the reader will instantly connect with that device.

To create a code that links the CR2500 or a CR3500 to a Bluetooth device, we need to know the Bluetooth address (often referred to as the BD\_ADDR) of that device. You can usually find the 12-character Bluetooth address somewhere on the device near the device's serial number.

Please visit the following web address and follow the instructions to submit your QuickConnect Code™ request:

<http://www.codecorp.com/bdaddr.php>

The Code Corporation embeds a unique  
Bluetooth Address in QuickConnect Codes
