 Belkin Hardware Version 2.11 Installation Notice

Please check your Belkin Bluetooth USB Adapter hardware version before installation.

If you have the Belkin Bluetooth USB Adapter hardware version 2.11, please read the following notice before beginning the installation of the device. The hardware version is labeled on the side of the adapter.

The software on the CD provided must be installed before the adapter is inserted into the USB port as directed in the installation instructions. Carefully following the "Quick Installation Guide" included with the adapter will prevent the need for a reinstallation.

If you have already installed a Belkin Bluetooth Adapter version 2.11 and are experiencing problems:

1. Remove the adapter from the USB port
2. Uninstall the software
3. Follow the installation instructions using a different USB port.

The Belkin Bluetooth USB Adapter hardware version 2.11 may not be able to be reinstalled using the same USB port as previous installations of version 2.11. If the device is installed improperly or uninstalled and the installation process repeated, a different USB port on the PC may be required for reinstallation. This does not affect the Belkin Bluetooth USB Adapter hardware version 2.
