

HOW COOPERATION LEADS TO BETTER HEALTHCARE

When it comes to healthcare, errors don't belong. Doctors, nurses, and every other healthcare practitioner take exacting precautions to reduce the margin of error. More and more, technology improves healthcare. But it can also complicate and slow down the system and providers. To better serve healthcare providers across the country, four different companies came together to offer a means of increasing efficiency and reducing errors.

Dryrain Technologies provides seamless browser integration with MEDITECH Expand for Code Corporation's barcode scanning technology. Dryrain's enterprise mobile browser, combined with Code's CortexDecoder SDK, create a powerful barcode scanning experience that is fast, accurate, and reliable. The enterprise browser automatically transcribes the barcode contents into a text field on any web page or web-based app. This eliminates the need for dedicated and proprietary software to automate barcode data entry into existing apps. Without the enterprise browser, users have to write new apps from the ground up.

This costs users both time and money, and users don't have a guarantee of the accuracy and efficiency they need.

INNOVATION THROUGH COOPERATION

Competition among technological companies is notoriously fierce. Even companies in healthcare fields resist collaboration. The high level of investment and time required to bring products and services to market usually inhibits collaboration between companies, even if they are not direct competitors. It takes coordination, commitment, and a genuine desire to benefit

healthcare providers and patients by improving access and enhancing safety. Code and Dryrain came together to make healthcare barcode scanning faster and more easily accessible. There was another area of healthcare, however, that benefitted by these two companies combining with a third.

MEDITECH
E X P A N S E

A growing area of healthcare is the movement of Electronic Health Records, or EHRs, to mobile devices. But not all health information technology (HIT) companies are up to the challenge of providing this service. Tracking each component of an individual's care, keeping an accurate electronic record, and making it available with a mobile device is a complicated process. One company that rises to this challenge is MEDITECH. For more than 50 years, MEDITECH has helped improve patients' access to their health information to increase their participation in their care. They also sought to improve how healthcare organizations serve their communities through faster, safer technology that provides instant access to records, knowledge, and data. Using electronic solutions

and secure mobile apps, they engage local healthcare in improving communication between patients and providers.

BENEFITING PATIENTS AND PROVIDERS

Today, Code, Dryrain Technologies, and MEDITECH have come together to offer unprecedented speed and accuracy in mobile medical barcode scanning. Hospitals and clinics in small to medium-sized communities can now have access to resources once only seen in facilities in major cities. They can offer consistent, reliable, and accurate information to providers and patients alike. The purchase of this combination is only made available through the fourth component, ACS MediHealth in Atlanta, Georgia. ACS MediHealth is MEDITECH's preferred partner for mobile devices. They take all the different components, configure, deploy, and support the entire package, giving end-users the ease of one contact.

According to Code CEO Kent Hansen, "In a world of rising demands and unknown circumstances, it is crucial to get the information wherever the need exists. MEDITECH Expanse makes this happen by improving access to information. Dryrain Technologies makes this happen by providing speed and security. Code does this by increasing accuracy. ACS does this by making access to technology simpler. This is a powerhouse combination of companies dedicated to bringing the best technology to healthcare." Hansen added, "Faster, more accurate scanning of medications, patient IDs, and other treatments means cost savings to patients along with fewer risks. We are excited to join with Dryrain, MEDITECH, and ACS MediHealth to help get this technology into even more hands."

MAKE USE OF THIS COLLABORATION

Find out how this powerhouse combination can benefit your organization. Contact David Dean at ACS MediHealth: 800-488-3304, or visit www.acsmedihealth.com.
