RE: ISO 9001 Standard Compliance

Dear Valued Partner:

Thank you for your business with Code and interest in our quality procedures. Code Corporation has a Quality Management System (QMS) that documents the company's business practices in an effort to better satisfy the requirements and expectations of customers and improve the overall management of the company.

Code's QMS meets the requirements of the International Standard ISO 9001:2008. The system covers the entire life cycle of our portfolio, addressing the design, development, production, and servicing of the company's products. The QMS manual describes the system and management of quality, as well as delineating authorities, interrelationships, and responsibilities of the personnel that perform within the system. This manual also provides procedures or references for all activities to ensure compliance to the necessary requirements of the standards.

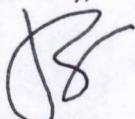

This manual is used internally to guide the company's employees through the various requirements of the ISO standard that must be met and maintained in order to ensure customer satisfaction. It focuses on continuous improvement and provides the necessary instruction to create an empowered workforce.

Everyone within the organization understands and accepts that all processes must meet or exceed customer requirements consistently and reliably. Code maintains documented procedures to control documents and records within the quality system. Any standard process across departments is to be documented and controlled in this manner.

Code also strives to work with vendors that meet our quality standards. Our primary contract manufacturer is ISO 9001 and 14000 certified, and our other primary finished good vendors hold similar certifications. Copies of these certifications are available on our corporate website at <http://codecorp.com/product-certifications.php>.

We have a tenet of Unrivaled Quality, and our people and processes work towards that end. When you invest in Code, you're investing in a reliable, repeatable approach to product design and manufacture, resulting in high performing products you can count on for years to come. We look forward to working with you.

Sincerely,

Jana Buck
Vice President, Operations
